

One Solution, One System, One Answer. The **Leonardi** M1 Silver

The **NEW** M1 Silver Cutting System from Leonardi is an affordable, simple solution. The M1 Silver with Patent Pending M1 technology allows for greater maneuverability, faster clean-up and **THE EASIEST TOOTH CHANGE IN THE BUSINESS!**

- **Smoother / Faster / Easier:** The revolutionary M1 is smoother, faster and easier than anything on the market.
- **M1 Technology Single Tooth & Bolt:** The Patent Pending direct mount design has no rights, lefts, straights or pockets - and only one tool required to install and/or replace - allowing for the fastest tooth-changing time, simple inventory management, less downtime and no pocket removal.
- **Phantom Technology See Through Wheel:** Utilizing the Patented Phantom Wheel™ Technology, the M1 wheel has a unique perimeter design and cut-outs that allow the operator to “see-through” the wheel when cutting. It is perfect for situations where a stump has grown around a permanent object such as a fire hydrant, building, curb, sidewalk, or tombstone - where you need to *SEE* your cut, not simply guess at it.
- **Integrated Chip Management:** The innovative tooth design helps flying chips stay contained within a significantly smaller area during grinding. Most chips will land within the width of the grinding machine.
- **Lower Total Cost:** With significantly fewer teeth needed, and the elimination of pockets, bolts and allen wrenches, the total cost of using and maintaining your equipment decreases.
